Chapter 1: Solar Ovens

Solar ovens are a great way to cook food without using any electricity or gas. They're perfect for camping, picnics, and emergencies. In this chapter, you'll learn how to build two different types of solar ovens: a box oven and a parabolic oven.

A parabolic solar oven is a more efficient way to cook food using the sun's energy.

Chapter 2: Solar Water Distillers

Solar water distillers are a great way to purify water using the sun's energy. This is especially useful in areas where clean water is scarce. In this chapter, you'll learn how to build two different types of solar water distillers: a single-effect still and a multiple-effect still.

A multiple-effect solar water distiller is a more efficient way to purify water using the sun's energy.

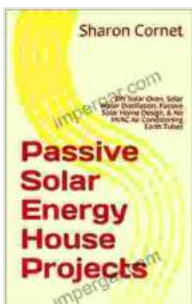

Chapter 3: Passive Solar Homes

Passive solar homes are designed to heat and cool themselves using the sun's energy. This can significantly reduce your energy bills and make your home more comfortable. In this chapter, you'll learn how to design and build a passive solar home.

With the help of this guide, you'll be able to build your own solar oven, solar water distiller, and passive solar home. These projects will not only save you money and reduce your environmental impact, but they will also give you a sense of accomplishment and satisfaction.

So what are you waiting for? Get started today and start living a more sustainable life!
