Designing Inclusion for Real World Applications

In today's increasingly diverse and interconnected world, it is imperative that we design products, services, and environments that are accessible and usable by everyone, regardless of their ability or disability. Inclusive design is not only about meeting legal requirements or creating a fairer society; it is also about good business sense. By designing for inclusion, we can create products and services that appeal to a wider audience, increase customer satisfaction, and foster a more positive and welcoming environment for all.

Designing for inclusion can be challenging, however. There are many different types of disabilities, and each person experiences disability in a unique way. This can make it difficult to know where to start or how to ensure that your designs are truly inclusive.

Designing Inclusion for Real World Applications is a comprehensive guidebook that provides practical guidance on how to design inclusive products, services, and environments.
